

slice

Slice is the first and the original Chool. The wooden side panels are sliced away to allow an uninterrupted view of the reactive backrest in action. The white front panel is angled in order to allow the user to draw their feet back for extra comfort.

slice-s

Like Slice, Slice-s features the same sliced away wooden side panels to show off the reactive backrest. The difference is that Slice-s provides the user with the opportunity to elect to have the front panel padded and fully upholstered.

square

The wooden side panels on this model are square shaped meaning that when not in use, the backrest is hidden away until activated by the user. Like Slice, the aluminium front panel is angled for the users comfort.

square-s

As with Square, this model boasts square side panels which conceal the backrest when not in use. When activated the backrest slides up and into position. As with the Slice-s model the front panel is fully upholstered.

softy

As the name suggests, Softy is fully upholstered and when in stool mode, can be sat on from any angle. The upholstered design accentuates the slice of the backrest and allows an uninterrupted view of Chool in action.

max

The Max model is larger than the other models and has a slightly higher backrest to provide additional back support. Max has more padding for extra comfort and features wooden side panels complete with arm rests.

max-s

This design is the same size as the Max model boasting a higher backrest and softer upholstery. The difference from Max is that Max-s comes with fully upholstered side panels and arm rests.

movement

Chool is an innovation in seating design which has the unique ability to introduce dynamic movement into any environment. Chools ability to adapt its form means that it beautifully integrates with tables and work surfaces and makes any space memorable. Patent No: 1011059.1

When sat upon the seat pod slowly descends a few inches to a standard seat height. This action seamlessly operates some clever bits tucked away inside that smoothly deploy a backrest and Chool transforms from its stool-like form into a chair. To see Chool in action pop along to slam.co

customisation

Chool has been specifically designed for full customisation. Its modular design welcomes the introduction of complimentary colour ways and fabrics. As standard we offer all fabrics from the Camira and Kvadrat range. The non-squidgy surfaces can be finished in any RAL colour. The side-pods can also be finished in a walnut veneer.

Slam offers an inclusive design service which ensures that you maximise the impact of the product.
